Raychem Underfloor heating

Datum
22.11.2006

Dear Mr. Bittner,

After internal verification and testing we can recommend Beukers flooring in combination as a floating system with Raychem T2Red & Reflecta underfloor heating system.

In principle the glued installation of Beukers woodenfloors can be released for electrical floor heating systems which are embedded in a surfacer or screed based on a self-regulating technology like Raychem T2Red heating cable.

It is stringent necessary to keep the technical guidelines according our technical data sheets.

Kind regards

Beukers vloeren

Mr. Beukers
