**Raychem Under floor heating system**

---

Dear Mr. Bittner,

We can confirm that the Raychem self-regulating floor heating technology appears to have advantages over conventional electrical floor heating systems with wooden floors, because it prevents "local overheating".

On the basis of present information and knowledge about Raychem self-regulating under floor heating and executed tests with T2Red & Reflecta we consider self-regulating, electrical floor heating as one of the safest solutions in combination with a floating PARADOR Laminate or Parquet installation.

It is stringent necessary to keep the technical guidelines according our technical data sheets.

Kind regards

PARADOR

Frank Beerhorst

Head of Product Management
