Raychem Underfloor heating

Dear Mr. Bittner,

With regards to our discussion, we can confirm that the Raychem self regulating floor heating Technology is suitable to be installed underneath MeisterWerke Laminate and/or - Parquet flooring, using the floated installation method.

Our executed tests on the self –regulated heating system “Raychem” T2red + TeReflecta have shown positive results by setting the temperature level for the heating system below 26°C.

To avoid mistakes during installation and ensure optimum performance, it is necessary be in line with our technical Installation Guidelines and our technical data sheets/ descriptions.

It's also important to consider our remarks within our “cleaning and maintenance instructions” and take care concerning the climatic conditions during Usage.

with best regards

MeisterWerke Schulte GmbH
