Ref : Raychem Underfloor heating  
Date : 22/11/06

Dear Mr. Bittner,

After careful consideration, we can confirm that the Raychem self-regulating floor heating technology appears to have advantages over conventional electrical floor heating systems with wooden floors, because it prevents "local overheating".

On the basis of present information and knowledge about Raychem self-regulating under floor heating we consider self-regulating, electrical floor heating as one of the safest solutions in combination with a floating Par-Ky installation.

Ofcourse, it is necessary to install the floor according to our technical guidelines, and respect all relevant guidelines on the heating system and initial heating procedure.

Kind regards

Par-Ky NV

Koen Biesbrouck
